If you haven't met a chemist, you're missing out! Chemists can be incredibly romantic and excellent in long-term relationships. Here are a few reasons for today's chemist. Chemists have some of the best pickup lines. Are you made of copper and gothic? You have to be because you are CuTe. Nerdy, yes, but a good icebreaker. Chemical experiments require attention to detail. Your date will be on time, will pay attention to you, and will remember your likes and dislikes. Science requires effort, practice and patience. You can expect the chemist to work in a relationship rather than call it quits when problems arise. Chemists are interesting! They are curious and always learn. Dating a chemist means you'll never get bored. Lab coats and goggles. It's so hot. Chemists don't forget to use protection. Chemists pay attention to personal hygiene. Chemists are almost always fantastic chefs. They also often brew amazing beer, make wine or perhaps distill their own spirits. Very few do drugs, although they know how to do it. Chemists are smart. They can have meaningful conversations and fix things. Chemists know how to pull all night. Chemists know all kinds of party tricks and cool ways to celebrate holidays. Because their sense of wonder never disappears, they are often good with children. Your family and friends probably enjoyed your date with the chemist. As engineers and other scientists, the chemist asks you because he or she really loves you and finds you interesting. Chemists are usually not small. Chemists are enterprising, to the point. They are natural researchers, but take the risk into account. They may be planning interesting and fun dates, but are unlikely to put you at risk. Similarly, chemists know all the toxic chemicals in every food, drink and household product, but won't go overboard, avoiding minor blemishes. Our next podcast from Sibley Integrative Medicine is now online. Today Dr. Rosanna Sheilberg and Harpreet Gujral talk to a clinical nutritionist specialist at Sibley Memorial Hospital, Renee Cha, about the importance of nutrition in short and long term medicine. In this preview, Renee explains who can benefit from consulting a nutritionist. To listen to the full podcast, click here: Ranking: 0.0/5 (0 votes) This course will introduce students to the rapidly evolving field of precision medicine and the role of big data analytics in improving patient care, clinical decision-making, and public health management. Students will be given access to the Johns Hopkins Precision Medicine Analytics Platform (PMAP) and learn how the infrastructure is built to support clinical research by integrating data from multiple research and information systems such as the Company's Extensive Electronic Medical Documentation (EMR). The class will give students access to a de-coordinated EMR data set curated by 60K patients diagnosed The class will use Python and Jupyter laptops to learn how to analyze EMR data. PMAP Cookbook Recipes laptops Jupyter and Datacamp accounts will be provided to students. After completing the course, students will have a review of the full lifecycle of the health care training system, from understanding the data elements needed to solve their problem, to figuring out the right analysis tools, and ending with how to take their algorithm and deploy it in a clinical setting as a clinical solution support application. For more information click here. General Internal Medicine Ginseng, Chinese Licorice, Atractylodes, Citrus Peel, Poria, and Pinellia Rhizome are the six main ingredients in The Chinese Six Gentleman Teapills, a time-tested remedy for digestive woes. Chinese name: Xiang Sha Liu Jun Wang (Shah Shah Shah Shah Lu Jun wang), Advertising Also known as: Aplotaxis Amomum tablets; Saussurea and Cardamom Six Gentlemen Tablets Indicators Weak Digestion Due to Deficiency of Spleen qi, with Symptoms of Bad Appetite, Nausea, Vomiting, Belching, and Chronic Diarrhea Features Tonics Ci's spleen, reduces phlegm and dampness Description of a modern patent based on an ancient remedy, the classic Xiang Sha Liu Jin-Jian formula combines in the qi ting. The tonic aspect of the formula consists of four herbs known as the Four Gentlemen: ginseng (ren shen), Atractylodes (bai ju), Poria (fuling), and Chinese licorice (zhi gan cao). These herbs form the basis of numerous formulas that treat qi deficiency in the lungs and spleen with chronic symptoms such as fatigue, shortness of breath, pale face, lack of appetite, indigestion, and liquid stool. Adding citrus peel (chen pi) and Pinellia rhizomes (ban xia) creates Six Gentlemen, a formula more appropriate for treating more acute cases of digestive imbalances with nausea, vomiting and snous. Adding Saussurea (mu xiang) and cardamom (sha ren) further increases the formula's ability to correct weakness and distress. It is especially suitable for people who are pale, weak, and qi deficiency accompanying digestive weakness. Manufacturer: Lanzhou Foci Dosage: 8 to 16 tablets, three times a day before eating Nausea, vomiting, diarrhea, constipation, and abdominal pain are just some of the diseases of the digestive system that can be successfully treated with Chinese medications. Use the information in this article the next time you need a time-tested remedy for a sour stomach. For more about traditional Chinese medicine, treatments, cures, beliefs, and other interesting topics, see: About AUTHORS: Bill Schoenbart is licensed in both herbal medicine and acupuncture and has M.A. in Chinese medicine. He is the editor of the Way of Chinese Herbs and Biomagnetic and Herbal Therapy. Ellen Shefi is a licensed massage therapist, licensed and a registered dietitian. She is a member of the American Association of Acupuncture and Oriental Medicine, Medicine, The Herb Association and the Oregon Acupuncture Association. No matter what age or activity level you probably experience some types of pain during your life. Whether you suffer from sciatica, knee pain, or menstrual pain - or pain from trauma like sprain, bruising, or burn - there is traditional Chinese medicine designed to relieve your discomfort. This article details several traditional Chinese painkillers. We will explain the readings, functions and even dosages of each drug. These effective remedies have stood the test of time; in fact, many of them are based on traditional formulas that have been used for thousands of years. Advertising First, let's look at the treatment of traumatic injuries that include bruising and swelling. Read the following section for more information. For more information on traditional Chinese medicine, treatment, treatment, persuasion, and other interesting topics, see: Medicinal or Pharmaceutical Chemists apply their research methods in the field of pharmaceuticals, with the most emphasis on discovering or improving drugs. Drug chemists work in academia, pharmaceutical companies, or government agencies, such as the U.S. Food and Drug Administration. The availability of jobs depends on factors such as the economy, government regulations and research subsidies. While most drug chemists work in the lab, some move to leadership positions, such as working on drug review boards. People who receive a bachelor's degree in medical chemistry work as laboratory technicians for pharmaceutical companies, but usually do not conduct their own independent research projects. Most medicinal chemists have received a master's or doctorate in pharmaceutical chemistry. Many have completed postdoctoral studies specializing in areas such as drug discovery, pharmaceuticals or pharmacodynamics. Throughout his academic preparation, the drug chemist studies the biological effects of drugs using concepts studied in areas such as organic chemistry, biochemistry, pharmacology, molecular biology and physiology. Medicinal chemists should be familiar with chemical research, data analysis and mathematical equation modeling. They need an analytical mind to conduct objective, accurate and thorough research. Working with pharmaceuticals, they need a critical mind to assess potential problems with both their own and other research projects. Once their work is completed, the drug chemist should be able to communicate their findings to others who are unscientific and scientists alike. The work of a drug chemist is important they may be responsible for discovering new drugs to treat diseases. They also test and improve the production process of existing drugs. Medicinal chemists can lead a research project in which they coordinate the efforts of an interdisciplinary team, including areas such as biology, computer design, franchise management and process research chemistry. In B To conduct chemical research, drug chemists are working to develop guidelines to make sure that new drugs are safe. Medicinal chemists are included in the general category of chemists of the U.S. Bureau of Labor Statistics. According to the BLS, their average annual salary was \$68,320 compared to May 2010. The lowest 10 percent of workers in this group earned less than \$39,250, while the top 10 percent earned over \$116,130. Employment growth is estimated to be slow at 4 per cent, comparable to 14 per cent for all other occupations. One reason for this low growth forecast is that there are very few medicinal chemists in general, as this occupation requires extensive training. The American Chemical Society notes a trend in 2012 for laboratories to merge and contract, but points out that these trends are cyclical based on the overall strength of the economy. According to the U.S. Bureau of Labor Statistics, chemists and materials scientists received an average annual salary of \$75,840 in 2016. At the low end, chemists and materials scientists earned a 25 percent salary of \$55,450, meaning 75 percent earned more than that amount. The 75th percent salary is \$102,920, or 25 percent earn more. In 2016, 96,200 people were employed in the U.S. as chemists and materials. About author Brenda Scottsdale is a licensed psychologist, six sigma master black belt and certified aerobics instructor. She has written professionally for over 15 years in scientific journals, including the Journal of Criminal Justice and Behavior and various websites.
